

ANSTO and the Australian Institute of Nuclear Science and Engineering (AINSE) welcome you to the **2019 New User Symposium**. This year's NUS will be held at the Australian Synchrotron's National Centre for Synchrotron Science (NCSS) on **Tuesday, 10 September 2019**.

The annual one-day event is tailored to inform novice users about the research capabilities of the Australian Synchrotron.

Techniques highlighted include:

- Powder diffraction
- Small and wide angle X-ray scattering
- Macromolecular X-ray crystallography
- Infrared and THz/Far-Infrared microscopy
- X-ray fluorescence microscopy
- X-ray absorption spectroscopy
- Soft X-ray spectroscopy
- Medical imaging

These methods encompass a huge range of research areas: Biosciences and Health, Chemistry, Earth and Environmental Science, Physics, Advanced Materials, Agriculture and Food Processing, Engineering and Manufacturing, Cultural Heritage and Archaeology, Energy and Sustainability Science and further more. There will also be sessions dedicated to accessing the facility and the support laboratories available onsite for Users.

Graduate students and Early Career Researchers can apply for travel support funding to attend the Symposium. Candidates for travel support must be part of an AINSE-member organisation.
